

Spring 2007

Successful EHR Implementations

DANETTE MARUYAMA, *Vice President/Client Relations*

Having met the stringent requirements for funding on behalf of its physicians TeamPraxis has nearly 100 physicians using, or in the implementation process, for TouchWorks. The physicians that were early to act claimed more than \$20,000 in funding and reserved their implementation slots. Because funding and implementation slots are limited, the funding and slots continue to be first come first serve.

TeamPraxis has successfully installed and piloted the TouchWorks® Electronic Health Records system for more than 50 of the 100 physicians. Today TouchWorks is the most widely used fully integrated EHR system in Hawaii. Our EHR physicians have their daily schedules, lab results, formulary information, e-prescribing, and the former “paper” chart at their finger tips.

Our physicians point to several key considerations for having chosen TeamPraxis and TouchWorks as their EHR solution. EHR implementations require a broad and technically deep understanding of software & upgrades, quality assurance, interfaces, implementation, support & a clinical knowledge base. Our sole focus on Hawaii and commitment to our local physicians is evident in the composition of our team. With a team of 44 people supporting our physicians including, developers, project managers, registered nurses, Microsoft certified support staff and network engineers our commitment to the success of an implementation is clear. The result of this commitment is a strong reference base of TouchWorks users.
